

Orthopedic Associates of Northern California

Post-Surgical Collagen Dressing

Your surgeon has identified you as a candidate to receive post-surgical collagen based wound dressings. Collagen dressings aide in improving and optimizing wound closure while minimizing risk of infection and other wound complications. As with any provided service, you have the option to opt-out. If you wish to do so, please let your surgical team know.

Within a couple of days after your surgery you will receive a package in the mail via FedEx or UPS containing the collagen based wound dressings. You should receive a set of collagen sheets, and an equal number of occlusive waterproof dressings to cover the collagen material. If your surgery was performed robotically, you will also receive a smaller set of collagen sheets and occlusive dressing for the robotic pin sites.

Here are some tips and guidance for the application and usage of the dressings:

Product Application:

- Remove previous dressing.
- Remove SkinTemp® II backing from the collagen sheet.
- The collagen sheet can be manipulated to fit the incision.
- Apply SkinTemp® II collagen sheet to the incision. Place collagen sheet with white side down, to make direct contact with the incision.
- Cover the collagen dressing with the secondary dressing; make sure the sides are sealed to the skin.
- For removal, moisten dressing with normal saline to avoid harming new tissue and causing pain.

Precautions:

- Do not use if you have any collagen or bovine sensitivities.

Video Instructions:

- Go to OANC website at www.oanc.org
- Navigate to the Conditions & Treatments Page
- Select Collagen Dressing OR
- Scan QR code with your smartphone
